

Cycle Tempo Tu Delft

Cycle-Tempo avoids this hassle by offering a very robust and fast algorithm tailored to the specific problem of energy systems. It can handle very demanding situations like the simulation of a complete IGCC power plant with CO₂ capture.

Cycle-Tempo - Asimptote

The computer program Cycle-Tempo was developed jointly by the Delft University of Technology and by TNO, the Dutch institute for applied research. Since 2011, it is further developed and supported by Asimptote in close cooperation with the original developers within the Propulsion and Power group of the TU Delft, constantly expanding Cycle-Tempo's capabilities.

Cycle Tempo Tu Delft - spencebpo.com

Abstract The Green Village, a project of the TU Delft, developed a solution for a new renewable energy system: The Car as Power Plant. The concept of the Car as Power Plant is that fuel cell cars not only can be used

Exergy analysis of the Car as Power Plant

TU Delft is a state university and is the oldest (1842) TU in The Netherlands. TU Delft is characterized by cutting edge research, providing first class education. With ~13,000 students and 2,100 academic staff TU Delft is the largest TU in The Netherlands. The research yearly results in about 185 PhD theses and >4,000 journal publications.

Theo Woudstra - tudelft.nl

Delft University of Technology contributed to the development of a software package for exergy calculations named Cycle-Tempo: a software tool for thermodynamic analysis and optimisation of systems for the production of electricity, heat and cold.

The TU Delft GameLab works with business and industry on the development of both analogue and digital serious games in order to make complex issues manageable and find solutions for processes in which numerous players with different interests collaborate.

Challenge the future 12 Energy System Thermodynamics at TU Delft • Modelling Packages used - Cycle Tempo and Aspen •Cycle Tempo- An in-house product for second law

Solid Oxide Fuel Cell systems and Renewable Energy sources

Jan 17, 2015: A group of TU Delft BSc students (Jibbe Knuit, Frans Kok, Philip Raaphorst and Arne Spek) did a project on measuring vertical stiffness and damping of bicycle tires. A total of 11 tires were measured at 3 normal loads and 3 internal pressures. The setup, data and results can be found at this website:

Bicycle Dynamics

A thermodynamic model of a downdraft gasifier has been presented. The model has been developed and implemented by means of the computer program "Cycle Tempo" developed by TU Delft. The model has been validated with several experimental data from the literature.
